PREDATOR S

CARBON GLOW

For the first time ever, the Predator S takes on Rebellion Timepieces' technical and stylistic signature: carbon. The Rebel watchmakers, resolutely determined to shake up conventions, accomplish a dazzling masterstroke by injecting the carbon with luminescent powder.

With its new Predator S Carbon Glow, Rebellion Timepieces invites us to discover a major update of its iconic model. Its design, once again inspired by the motorsport world, is much more powerful thanks to a groundbreaking case infused with carbon LumiNova® pigments. And, like all the watches assembled in the brand's workshops, the Rebel watchmakers have gone for cutting-edge technology to trigger emotion. Standing out from the crowd becomes an art!

Carbon fiber, the must-of-all-musts when it comes to imagining Formula 1 single-seaters like the ones of the Alfa Romeo F1 Team that Rebellion Timepieces partners with, boasts two decisive trumps for watchmaking: lightness and incredible hardness. This composite material also flaunts a weight/resistance ratio that's beyond compare. Carbon, 4 times heavier than steel and 10 times more resistant, also accentuates a watch's stylistics with its one-of-a-kind striated pattern that brings out highlights impressive design. All these features play a role in center staging the ultra-sporty, ever-so-original look of the new Predator S Carbon Glow.

By injecting green-glowing luminescent pigments into the carbon resin, Rebellion Timepieces breathes a double personality into this model: sporty by day, festive as soon as light fades away.

Like all the references in the collection, the Predator S Carbon Glow time data is driven by a Swiss Made caliber that's super sturdy and admirably accurate. This selfwinding movement beats at a standard frequency of 28,800 vibrations an hour, i.e. 4 Hz, and delivers a power reserve of 48 hours. This device nestles in the 42 mm-diameter case complemented by a luminescent alligator strap or an optional comfortable colored rubber one. The caliber animates the trio of hands hovering over the openworked, honeycomb-style dial with great precision.

What's more, to make sure there's something for everyone, Rebellion Timepieces' RE-Volt model is now also available vamped up with this exclusive Carbon Glow.

TECHNICAL SPECIFICATIONS

Case Materials:	Forged carbon luminova
Glass:	Sapphire crystals with anti-reflective treatment
Case back:	Sapphire crystals with anti-reflective treatment
Case dimensions:	42mm
Dial:	Black honeycomb
Water resistance:	50m / 5 ATM
Movement:	REB-01-000 swiss made automatic movement
Functions:	Hours, minutes, seconds and date
Jewels:	27
Balance frequency:	4 Hz (28,800 vph)
Power reserve:	48 hours
Strap and buckle:	White leather strap with green luminova coating, black DLC titanium folding buckle (option: black textile with velcro closure or rubber strap with black DLC titanium buckle)

PERFORMANCE, PASSION, PERFECTIONISM
- NO COMPROMISE.
