

Predator Mono-Pusher

Caliber Concepto 03021 DD

Self-winding mono-pusher chronograph movement

Introduction

REBELLION Timepieces was born of the same passion for perfect mechanics as REBELLION Racing. Unique bodywork, exceptional technical materials, exclusive engines and outstanding performance: each collection pays tribute to the spirit of competition and car racing.

With its multiple technical materials, dial in five superposed layers and references to auto mechanics, the Predator Mono-Pusher 30 Minutes extols high performance. Its round and angular characteristics are instantly recognizable. It is equipped with a unique and distinctive pusher which controls chronograph operation and watch setting. A tribute to endurance racing, the chronograph also enjoys a generous 50 hours power reserve, displayed on its original Full/Empty indicator at 6 o'clock. Available with several personalization options, because there is no standard rebel.

The Case

With the complex construction of its case in superimposed layers, the Predator is highly customizable. You can choose the colors of the dial, bezel and glass and engrave the side plate at 9 o'clock. Available options: steel, steel and ceramic, red gold, red gold and ceramic, carbon bezel, carbon dial, colored dial and colored glass.

The Movement

Based on a combination of technical materials (ceramic, carbon and steel), the automatic Swiss Made engine of this Predator combines strength and endurance, including its generous 50-hour power reserve. Performance measurement is conveyed in its simplest form with a distinctive mono-pusher. Sapphire crystal on the back reveals the superb movement and minutely large components.

Displays and functions

- 1- HOUR HAND
- 2- SECOND/CHRONOGRAPH HAND
- 3- MINUTE HAND
- 4- 30 MINUTE COUNTER
- 5- MONO-PUSHER CHRONOGRAPH START/STOP/RESET
- 6- SMALL SECOND
- 7- POWER RESERVE
- 8- **POSITION 1**: CROWN AT HOME POSITION
- 9- **POSITION 2**: CROWN AT TIME-SETTING POSITION

BEWARE:

To prevent damage to your timepiece, please never adjust the date function between 8pm and 3am of your REBELLION watch. This is the only way to ensure that the date mechanisms are not engaged. Changing the date when the mechanisms are engaged could seriously damage the movement. We recommend adjusting the date in the morning, around 7am.

Settings:

Setting the Time

Pull the crown out (1) from **POSITION 1** to **POSITION 2**, adjust the hands to the correct time (NB: around midnight the date will change), push the crown back to home **POSITION 1** (2).

Winding

Your timepiece is wound automatically by your wrist movements. With those movements your watch sets the winding mechanisms and stores the energy. When it is fully wound and off your wrist, your timepiece has a power reserve of 48 hours. If your watch has not been worn for some time, you must wind it manually by rotating the crown. To wind your watch, in **POSITION 1**, turn the crown clockwise approximately 10 full turns (3).

CHRONOGRAPH FUNCTIONS

Start Mode: When timing a specific event, the chronograph hands should be set to zero. To mark the starting point of the timer, press the mono-pusher once. The hand marking the seconds should now be set into motion.

Stop Mode: To stop timing, press the mono-pusher again. The pusher is now in **STOP MODE**.

Reset to Zero: Press the mono-pusher again to set all the chronograph hands back to zero.

Recommendations: Care & Maintenance

For best care of your watch we advise:

- ✂ Clean your watch regularly with a gentle microfiber tissue to keep it in optimal condition.
- ✂ Avoid contact with water or sweat to prevent premature ageing of your leather strap.
- ✂ After immersion in chlorinated or salty water, rinse it in freshwater and leave it to dry completely.
- ✂ Avoid placing your timepiece anywhere where it might be subjected to major variations in temperature or humidity (e.g. sauna), or direct sunlight. Do not expose your watch to extreme temperatures (e.g. behind a car glass for long periods). Your watch's movement is designed to function ideally in temperatures ranging from 0°C to 50°C.
- ✂ Avoid placing your timepiece near strong magnetic fields (e.g. speakers, electrical motors, etc.) as they can affect the running of your timepiece.
- ✂ Avoid any contact with abrasives, hazardous gases, solvents, detergents, mosquito repellent, sun creams, perfumes, cosmetic products, or other chemical products as they may damage the watch case, the strap, the glass or synthetic parts of your watch.
- ✂ Avoid any type of shocks to your watch. In the event that your watch is exposed to any violent impact or shock, have your watch checked by REBELLION Timepieces immediately.

- ✂ Never use your watch's pushers, wind the watch or adjust time/date when the watch is wet or has had any contact with water. We recommend this to avoid water penetration, even if your timepiece is water resistant. This is to minimize risk of water entering the case and being exposed to moisture.
- ✂ Check if the crown is returned securely to the home position after each adjustment to prevent any water intrusion.
- ✂ We also recommend that you never adjust the date function between 8pm and 3am of a REBELLION timepiece as it could seriously damage the movement.

HAVING YOUR WATCH SERVICED

To ensure the running of your watch, we advise regular service and maintenance by our workshop at REBELLION Timepieces S.A. As with any racing car, the exclusive motor of your timepiece needs regular servicing in order to function to its fullest potential. We advise you to have your watch serviced at least once every 3 to 5 years by our workshop at REBELLION Timepieces S.A. We suggest you to take your watch to an Authorized REBELLION Timepieces Retailer who will send it to our workshop where it will be inspected and analyzed by our watchmakers. During your watch's maintenance, the case and the movement will be completely disassembled, cleaned lubricated and reassembled. Then rigorous accuracy calibrations and water resistance tests will be performed. Upon request, the case and the buckle will be refinished and polished. The full

process takes several weeks because each watch must pass several tests to ensure REBELLION Timepieces' quality spirit.

If you have any questions about the servicing of your watch, please contact your Authorized Retailer or us directly at www.REBELLION-Timepieces.com

WATER RESISTANCE

Your Predator Mono-pusher is 100 meters (10atm) water resistance. The water resistance cannot be guaranteed indefinitely. In case of intensive use underwater, it is recommended to perform an annual pressure test on your watch. Under normal conditions we recommend testing every 2 years. The pressure test takes only a few minutes and can be performed at any official centre for REBELLION Timepieces or by an Authorized Retailer. A full list of retailers can be found on our website www.REBELLION-timepieces.com.
